ABOUT US

In the light of our 20 years experience in bentonite mining and cat litter production, we have made a decision to create the best cat litter brand ever. While using this ambitious sentence, we did not give priority to issues such as only product and packaging quality. We have identified the most sensitive issues that we consider to be more important, such as being friends before becoming a customer, empathy before making a sale, and providing customer satisfaction at every stage and under all conditions as the first article of our constitution. We didn't just write it on paper, we believed it with all our hearts. What could have been more natural than having our own brand after 20 years of experience and being a bit pretentious?

As of today, MCL Bentonite company has two bentonite licenses which are totally 2600 hectares and production plant that has annual production capacity of 150,000 tons of bulk and 70,000 tons of packaged cat litter, established on an area of 40,000 m2 in Fatsa OSB.

Within this framework, we are ready to be your business partner with our environment conscious, innovative, customer-oriented company vision and experienced team.

What is bentonite cat litter ?

Bentonite is one of the greatest miracles that nature gives us. All we have to do is transform this miraculous mineral into cat litter, using the most accurate and environmentally friendly technology, while preserving its natural form.

Bentonite cat litters are classified in to the group of clumping cat litters. One of the miracles it possesses is its high liquid absorption capacity as well as its strong and long-lasting odors control capacity.

Our Bentonite series cat litters, which are highly hygienic because they are produced by being processed through heat- treatment, are also free of dust by using double sieving system.

In this way, we have provided a much more hygienic and much more comfortable environment for our cat friends and owners.
